What is Claimed is:

- 1. A combination apparatus which converts from a dolly to a cart comprising:
 a box for hauling a load, said box including a bottom portion having four
 sides, and at least three side portions disposed about at least three sides of the
 bottom portion and extending perpendicularly outward from the bottom portion;
 - a detachable handle, said handle removably attached to the box in at least two positions such that handle is used in a first position as a dolly and in a second position as a cart;
 - at least one wheel, attached to said box; and at least one stabilizing foot attached to the box.
- 2. The apparatus of claim 1, further comprising a gate portion, removably attached to the fourth side of said box and extending outward.
- 3. The apparatus of claim 2, wherein the gate portion further comprises an accessory box mounted on said gate portion.
- 4. The apparatus of claim 1, further comprising a gate portion removably attached to the detachable handle, extending away from the bottom portion of the box.
- 5. The apparatus of claim 4, wherein the gate portion further comprises an accessory box mounted on said gate portion.

450191

- 6. The apparatus of claim 1, further comprising an axle mounted on the underside of the box for mounting the at least one wheel.
- 7. The apparatus of claim 6, wherein the at least one wheel comprises two wheels mounted on the axle, said two wheels mounted on opposing sides of said box.
- 8. The apparatus of claim 1 wherein the axle is located at a distance such that outer perimeter of each wheel is flush with the front side of the box.
- 9. The apparatus of claim 7, further comprising a pedal mounted on said axle midway between the two wheels.
- 10. The apparatus of claim 1, wherein the at least one stabilizing foot is U-shaped.
- 11. The apparatus of claim 10, wherein the at least one U-shaped stabilizing foot comprises two U-shaped stabilizing feet mounted on opposing sides of the box.
- 12. The apparatus of claim 1, wherein the detachable handle is U-shaped, having a handle portion and opposing parallel shafts.

- 13. The apparatus of claim 11, wherein the detachable U-shaped handle further comprises an accessory bar formed into the handle transversing the opposing parallel shafts.
- 14. A combination dolly and cart, comprising:

a box for hauling a load, said box including a bottom portion having four sides, and at least three side portions disposed about at least three sides of the bottom portion and extending perpendicularly outward from the bottom portion;

a detachable handle, said handle removably attached to the box and that the handle when placed in a first position is a dolly and is a cart when placed into second position;

at least one stabilizing foot attached to the box;

a gate attached to the detachable handle, said gate including an accessory box;

an axle mounted on the box;

a left wheel and a right wheel attached to said axle and mounted on opposing sides of said box; and

a pedal mounted on said axle midway between said left wheel and right wheel.

15. A dolly combination cart, comprising:

450191 12

a box for hauling a load, said box including a bottom portion having four sides, and at least three side portions disposed about at least three sides of the bottom portion and extending perpendicularly outward from the bottom portion;

- a detachable handle, said handle removably attached to the box; at least one stabilizing foot attached to the box;
- a gate attached to the box, said gate including an accessory box; an axle mounted on the box;
- a left wheel and a right wheel attached to said axle and mounted on opposing sides of said box; and

a pedal mounted on said axle midway between said left wheel and right wheel.
